Summary

Software engineer with 4 years of experience building and supporting production software for automated warehouse systems. Designed and maintain a full-stack diagnostics platform, and write Python and SQL tooling that turns operational data into reliable reports and faster issue resolution. Comfortable working directly with customers, debugging live systems on Linux, and writing clean, maintainable code.

Technical Skills

Languages: Python, SQL, JavaScript, Java

Tools and Platforms: Linux, Bash, SSH, Git, vim, X11

Practices: Full-stack development, distributed systems troubleshooting, workflow diagnostics, service recovery, automated reporting, root cause analysis

Experience

Software Support Engineer | SSI Schaefer | Ozark, MO | 2022 – Present

- Designed, built, and maintain a full-stack warehouse diagnostics platform that gives 100+ users support and operations visibility into system health and performance.
- Develop Python and SQL tools to analyze operational data, manage servers, and automate recurring reports, replacing manual investigation work 12+ hours per week.
- Diagnose and fix software issues in live production environments using SQL, Bash, and SSH on distributed systems, restoring service with minimal downtime.
- Investigate recurring defects to find root causes, then deliver reports to management that drive fixes and operational improvements.
- Work directly with customers to clarify software behavior and floor workflows, translating operational problems into technical solutions.

Education

B.S., Computer Science | Missouri Western State University | 2020 – 2022

Associate of Arts | North Central Missouri College | 2018 – 2020
